- Few Considerations
- What is myTeamWorks?
- Business Drivers for myTeamWorks
- How to deliver myTeamWorks projects
- Live Demo

Generational changes in Collaboration

All previous generations of collaboration services have been characterized by the addition of new forms of collaboration. What is different about the new generation of collaboration services is that it is a repackaging of existing collaboration services with different use patterns.

Source Gartner

Few Considerations

- A new approach to collaboration is required where the social aspect is central within the collaboration paradigm to break the collaboration silos created by an uncontrolled proliferation of collaboration sites
- (Automated) Information streams are more and more relevant to ensure collaboration efficiency within a multi-level collaboration environment
- Within collaboration implementation scenarios, self service site provisioning & lifecycle management still represents a fundamental gap within SharePoint 2010

What is myTeamWorks?

-  **myTeamWorks** is a Team Collaboration Business Accelerator to enable:
 - A centralized workspace where to have instant access to all ongoing projects
 - The sharing of knowledge and automated notification of user and system events through a project wall
 - A self-service based request for provisioning of template based project sites
 - The lifecycle management of project sites
 - An easy to use administration user interface to manage the organization's project sites
- The solution is built around SharePoint 2010

Business Drivers for myTeamWorks

The following are business drivers driving  myTeamWorks based projects:

- **Promote true Enterprise collaboration** - Break the silos of individual collaboration islands and give the chance to forge dynamic cross-functional channels.
- **Implement a clear governance** - Avoid uncontrolled proliferation of collaboration sites that do not meet corporate governance and generate high maintenance and administration costs.
- **Business vs. IT Win-Win Scenario** - make business user independent from IT for collaboration space site provisioning activities while reducing IT overhead.

How to deliver myTeamWorks projects

We foresee two alternative approaches in delivering myTeamWorks projects:

- Pilot & Enhance – installing myTeamWorks in a Pilot environment, getting Pilot users familiar with its out-of-the-box capabilities and then collect prioritized requirements through a scoping workshop that will define enhancements roadmap;
- Scope & Build – organizing a Functional Scoping Workshop to scope requirements using myTeamWorks to drive the workshop itself and as the foundation on which participants are normed. The workshop outcome will drive end solution implementation and future roadmap.

Live Demo

The screenshot shows the MyTeamWorks web application interface. At the top, there is a navigation bar with the Cambridge Technology Partners logo, the text "Spaces Activities My Spaces", and a user profile "Yan YELLOW". The main content area features a large heading "Welcome to myTeamWorks" with a diamond-shaped logo. Below this is a photograph of a hand holding a small object. To the right of the photo is a blue box with the text "Welcome to MyTeamWorks" and "Bringing you new collaboration capabilities and new ways of managing your information, guided by an Enterprise-wide Governance." Below the photo is a "Request a Space" button with a plus icon. Further down, there are two sections: "What's it all about?" and "What does MyTeamWorks mean to you?".

Cambridge Technology Partners Spaces Activities My Spaces 0 Yan YELLOW

Welcome to myTeamWorks

Welcome to MyTeamWorks
Bringing you new collaboration capabilities and new ways of managing your information, guided by an Enterprise-wide Governance.

 [Request a Space](#)

What's it all about?
Not just another place to put stuff. Collaborate and manage your information using Work Point Collaboration Spaces with support from people in your function and your local IS team.

What does MyTeamWorks mean to you?
Starting today, you can try new capabilities such as Blogs, Communities, Wikis and Event spaces. Project Spaces are also available for Project collaboration.

Any Questions?

Get IT right
